Dear Hiring Manager,

I am writing to express my interest in the Software Engineering role at your organization. With over seven years of experience delivering high-scale consumer banking and payment products at JPMorgan Chase & Co. — including platforms serving approximately one million daily users — I bring a strong track record of leading full product lifecycles from planning and architecture through delivery and production support.

In my current role as Vice President, Software Engineering, I lead the development of Payment Activity and Transfer Activity experiences across the consumer banking platform. I drive an agentic, AI-assisted software development lifecycle using GitHub Copilot and a structured knowledge base, automating requirements intake, PRD generation, task decomposition, and code delivery, alongside AI-assisted test generation across unit, component, and end-to-end suites. This approach has significantly reduced cycle time from requirements to production and improved regression confidence across my team.

Beyond feature delivery, I have built internal CLI tooling for production CDN artifact publishing and feature flag management, enabling self-service deployments and eliminating manual release steps. I also own end-to-end execution across roadmap planning, sprint delivery, and cross-functional stakeholder alignment, while establishing front-end engineering standards and mentoring associate engineers to strengthen code quality, accessibility, and delivery consistency.

My technical expertise spans JavaScript, TypeScript, React, Node.js, and AWS, with a deep commitment to accessibility-first engineering and WCAG compliance. I hold an AWS Certified Cloud Practitioner certification and a Bachelor of Science in Computer Science and Engineering.

I am excited about the opportunity to bring my experience in building scalable platforms, leading engineering teams, and leveraging AI-augmented workflows to your organization. I would welcome the chance to discuss how my background aligns with your team's goals.

Sincerely,

Ali Abdullah Khan
