Ali Abdullah Khan

Software Engineering Leader | Consumer Payment Platforms | End-to-End Product Ownership

929-444-2248 | abdullah017196@gmail.com | linkedin.com/in/abdullah017196 | github.com/hellsalve017196 | alikhan.dev | Holbrook, New York, USA | Open to Relocation (within USA) | U.S. Citizen – No sponsorship required

Professional Summary

Software engineering leader with 7+ years of experience delivering high-scale consumer banking and payment products, including platforms serving approximately 1 million daily users. Leads full product lifecycles from planning and architecture through agile delivery, release readiness, and production support. Deep front-end expertise in React, TypeScript, reusable UI architecture, and WCAG/ADA accessibility — applied end to end, from API contract design in Java/Spring Boot services through release and production triage — with a record of mentoring engineers and improving engineering practices.

Core Competencies

Engineering Leadership | Front-End Architecture | React | TypeScript | API Contract Design | Consumer Payments | REST APIs | Production Support & Triage | Accessibility (WCAG/ADA) | Agile/Scrum | Agentic-Driven Development | Stakeholder Management | CI/CD | Testing | Mentoring

Professional Experience

JPMorgan Chase & Co. New York, NY

Lead Software Engineer *Feb 2023 – Present*

- Lead development of Payment Activity and Transfer Activity across the consumer banking platform, re-architecting legacy wire-transfer, account-transfer, and payment pages from BlueJS to React.
- Own end-to-end execution from roadmap planning and sprint delivery through release coordination and post-production support, triaging customer-impacting issues via Splunk log analysis.
- Establish front-end engineering standards and mentor associate engineers, strengthening code quality, maintainability, accessibility, and delivery consistency.
- Extend Java/Spring Boot services behind Transfer and Payment Activity, adding REST endpoints and partnering with product and backend engineering on API contract design so payment components render faster.
- Build internal CLI tooling for CDN artifact publishing, feature flag management, and automated deployment — including a Python CLI that uses AI to generate and validate release configuration — enabling self-service workflows and catching misconfigurations before rollout.
- Built an Electron desktop application for macOS that automates release-helper workflows for deployment validation.
- Drive an AI-assisted software development lifecycle using GitHub Copilot and a structured knowledge base, automating requirements intake, PRD generation, task decomposition, and code delivery to compress requirements-to-production cycle time.
- Expand automated test coverage across unit, component, and end-to-end suites through AI-assisted test generation, improving regression confidence and reducing QA bottlenecks.

JPMorgan Chase & Co. New York, NY

Associate Software Engineer *Mar 2019 – Feb 2023*

- Engineered and maintained SingleDoor, a unified payment platform integrating Bill Pay, QuickPay with Zelle, and credit card payment workflows for approximately 1 million daily users.
- Delivered a credit card debt-repayment experience that let customers unable to pay their full balance enroll in structured payment plans, building BlueJS components from Figma designs, contributing endpoint changes to the Java/Spring Boot services behind the flow, authoring end-to-end test scripts, and shipping to production.
- Built an internal Chrome extension that verified CDN artifact publication, simplifying release validation and reducing manual checks for developers.
- Implemented analytics instrumentation and remediated accessibility defects, enabling WCAG/ADA-compliant customer experiences across the SingleDoor platform.
- Supported production releases and issue resolution in a highly regulated financial-services environment.

Charter Communications Charlotte, NC

Full Stack Software Developer *May 2018 – Feb 2019*

- Modernized legacy applications by migrating user-interface components to AngularJS, and designed RESTful APIs with TypeScript and Node.js to support feature delivery across multiple internal products.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, Java, Python, Bash, Shell Scripting
Frameworks & Libraries: React, Context API, AngularJS, Vue.js, Node.js, Spring Boot, Tailwind CSS, shadcn/ui, Bootstrap, Sass, WebSocket, Web Workers, Flask, Electron, Chrome Extensions, BlueJS
Cloud, Tools & Practices: AWS, Git, Webpack, Babel, REST APIs, JIRA, Figma, Jest, Cypress, Playwright, CI/CD, Splunk, Claude Code, GitHub Copilot, analytics instrumentation

Certification

AWS Certified Cloud Practitioner *Sep 2023*

Amazon Web Services

Education

Queens College New York, NY

Bachelor of Science in Computer Science and Engineering
